Subject Index—Volume 8

A

Absorptiometry, effects of the polyenergetic character of the spectrum of ^{125}I on the measurement of bone mineral content by, 143

Acetazolamide, sodium diatrizoate-induced convulsions in the rabbit affected by protective action of, 50

Adhesive contrast material
- canine upper urinary tract affected by, 61
- diagnosis of experimental gastrointestinal bleeding and the role of, 100
- movement of the mitral valve and its correlation with the first heart sound studied with high-speed cineradiography and use of, 150

Aging kidney, lack of specificity of renal angiography in the diagnosis of renal parenchymal disease and, 90

Airways, involvement of the parasympathetic nervous system, following pulmonary thromboembolism, in the narrowing of pulmonary, 315

Altered cerebrospinal fluid flow, the dog with chemical meningitis and, 33

Ameroid constrictors, angiographic demonstration of collateral development in experimental coronary occlusion with, 131

Angiography
- adhesive contrast material in the diagnosis of gastrointestinal bleeding by, 100
- demonstration of collateral development in experimental coronary occlusion with ameroid constrictors by means of, 131
- protective action of acetazolamide against convulsions in the rabbit caused by use of acetazolamide in, 50
- response of mesenteric vessels to vasoactive drugs following autotransplantation of the small intestine evaluated by, 138
- transcatheter electrocoagulation of blood vessels in, 295

Arachnoiditis, an electro-mechanical head support system for precise control of contrast media in myelography to prevent possible complication of, 178

Arterial carbon dioxide tension, an angiographic study of the effects of cardiac pacing on the cerebral circulation irrespective of, 111

Arteriovenous fistula, transcatheter electrocoagulation of blood vessels in closing, 295

Arthrography, thermography as a screening procedure in internal derangement of the knee prior to, 228

Aspiration, echo patterns with an ultrasonic transducer in, 78

Atheroma, angiographic evidence of stagnant flow zones in association with, 28

Authors reply to comments on "Lack of specificity of renal angiography in the diagnosis of renal parenchymal disease" (correspondence), 361

B

Bile excretion, effect of phenobarbitol on iodipamide and iopanoate, 126

Bile flow, prostaglandin E_2 ineffective in reducing secretin-induced, 9

Blood clots, failure in using ^{131}I streptokinase to visualize experimentally produced, 377

Blood flow
- circulation of anesthetized dogs and stagnant zones of, 28
- effect of sustained isometric hand-grip contractions on, 22
- radiographic method to determine pulsatile, 255

Blood-flow velocity, deeply situated arteries and monitoring of, 160

Bone
- comparisons of x-ray and neutron radiography of samples of pathologic, 326
- effects of the polyenergetic character of the spectrum of ^{125}I on the mineral content measurement of, 143

Bone analysis, effects of adipose tissue on the absorptiometric of bone mineral mass and, 84

Bone density, measurement of the velocity of ultrasound in human cortical bone and the effect of, 72

Bone radiography, effects of adipose tissue on the absorptiometric measurement of bone mineral mass in, 84

Bone resorption, use of a 70mm roll-film enlarger (Helio Contrastor) for preliminary in vivo microradioscopic-morphometric observations of, 418

Brachial angiography, sustained isometric hand-grip contractions during, 22

Bronchial arteriography, experimental studies of, 219

Bronchial diameters, bronchography in the pediatric patient and dimensional response of, 121
Bronchioles, tantalum oxide—a non-explosive substitute for metallic tantalum powder in bronchography of, 333
Bronchoconstriction, pulmonary thromboembolism followed by involvement of the parasympathetic nervous system in, 315
Bronchograms, dimensional response of large airways in pediatric patient when performing, 121
Bronchography, tantalum oxide—a non-explosive substitute for metallic tantalum powder in, 333

C

Cardiac arrest, cerebral angiography during acetylcholine chloride induced momentary, 413
Cardiac output, an angiographic study of cardiac pacing on the cerebral circulation and, 111
Cardiac pacemaker, angiographic study of the cerebral circulation as affected by, 111
Carotid bulb, stagnant flow zones in, 28
Catheter, electrocoagulation of blood vessels by, 295
Cerebral angiography
  acetylcholine chloride induced momentary cardiac arrest and, 413
  study of effects of cardiac pacing on cerebral circulation by, 111
Cerebral blood flow, cerebral angiography during acetylcholine chloride induced momentary cardiac arrest and observation of reduced, 413
Cerebral circulation, angiographic study of the effects of cardiac pacing on the, 111
Cerebral ischemia, cerebral angiography during acetylcholine chloride induced momentary cardiac arrest and observation of, 413
Cerebrospinal fluid, use of silastic to produce communicating hydrocephalus for investigation of flow of, 105
Changes in radiology training (guest editorial), 357
Chlorpromazine, red blood cells protected from deforming action of acetrizoate by, 205
Cholecystography
  effect of prostaglandin E_2 on, 9
  effect of vagotomy on gallbladder size and contractility in the dog studied by, 371
Cholecystokinin, vagotomy in the dog and response of gallbladder to, 371
Cholinesterase, the inhibitory effect of some contrast media on human blood, 68
Cisternography
  determining cerebrospinal fluid flow alterations in the dog with chemical meningitis by use of, 33
  use of silastic to produce communicating hydrocephalus for documentation by, 105
Colchicine, red blood cells inadequately protected from deforming action of acetrizoate by, 205
Comments on "Lack of specificity of renal angiography in the diagnosis of renal parenchymal disease" (correspondence), 361
Communicating hydrocephalus, use of silastic to produce, 105
Computer, reducing patient delays in a diagnostic radiology department: analysis by simulation techniques using a, 396
Congenital heart defect, effect of contrast media used in angiocardiography on, 191
Contrast enhancement, a multiple image subtraction technique for, 43
Contrast material-red blood cell reactions (editorial), 189
Contrast materials, prostaglandin E_2 ineffective in reducing bile flow dilution of cystographic, 9
Contrast media (ium)
  erythrocytes affected by iodinated, (Part I), 199; (Part II), 205
  inhibition of human blood cholinesterase activity by some, 68
  metabolic and cardiovascular effects of selective intracoronary injections of, 13
  protective action of acetazolamide against convulsions in the rabbit caused by acetazolamide, 50
  assessment of biochemical and hematologic changes related to oral administration of an iodinated, 322
  experimental studies of peribronchography using newly prepared, 219
Convulsions, positive action of acetazolamide against diatrizoate-induced, 50
Coronary arteries, selective catheterization in the rabbit of, 350
Coronary arteriography, selective catheterization of the coronary arteries in the rabbit for, 350
Coronary artery occlusion, angiographic demonstration of collateral development in experimental, 131
Coronary blood flow, effect of water soluble radiopaque substances on, 13
Cortical bone apposition-resorption, effects of primary osteoarthrosis of the hip on, 251
Cortical bone mass, effects of primary osteoarthrosis of the hip on, 251
Criteria for planning, the academic radiology department and an assessment of the importance of, 181

Cyanosis, effect of contrast media used in angiocardiography on, 191

Cystography, appearance of naturally occurring vesicoureteral reflux in mongrel dogs affected by position during, 354

D

Deep arteries, blood-flow monitoring in, 160

Diagnostic radiology, feasibility of classifying disseminated pulmonary diseases based on their Fourier spectra, 345

Dibucaine, red blood cells protected from deforming action of acetrizoate by, 205

2,3-diphosphoglyceric acid, contrast media used in angiocardiography cause no significant changes in red blood cell concentrations of, 191

Dogs
effects of iodinated contrast media on erythrocytes in, (Part I), 199; (Part II), 205
incidence of naturally occurring vesicoureteral reflux in mongrel, 354

Doppler, blood-flow monitoring in deeply situated arteries by means of shift principle of ultrasound, 160

E

Editorial, 360

Elastic constant of bone, measurement of the velocity of ultrasound in human cortical bone and the effect of, 72

Elbow flexion, forearm angiography affected by, 22

Electrocoagulation, blood vessel transcatheter, 295

Electrolytes, oral administration of an iodinated contrast medium with no statistically significant change in, 322

Electron microscopy, effects of iodinated contrast media on erythrocytes studied by, (Part I), 199; (Part II), 205

Enzyme inhibition, the role of some contrast media in, 68

Enzymuria, adhesive contrast material (ACM) as cause of, 61

Erythrocytes, effects of iodinated contrast media on, (Part I), 199; (Part II), 205

F

Film, detection and evaluation of localization errors in patient radiation therapy using appropriate, 384

Filtration
absorption edge fluoroscopy using quasi-monoenergetic x-ray beams obtained by, 402
measurements of bone mineral content affected by polyenergetic character of the spectrum of ^{125}I and tin, 143

First heart sound, movement of the mitral valve and its correlation with the, 150

Forearm circulatory transit time, effect of change in elbow flexion during sustained isometric hand-grip contractions on, 22

Fourier spectra laser optics, feasibility of classifying disseminated pulmonary diseases using, 345

Free fatty acids uptake, effect of meglumines, old Renografin, Conray and new Renografin on, 13

G

Gallbladder
effect of prostaglandin E_2 on roentgenography of the, 9
effect of vagotomy on size and contractility of the dog's, 371

Gastrointestinal absorption of Iopanoic Acid, 1

Gastrointestinal bleeding, adhesive contrast material in the diagnosis of, 100

Gastrointestinal system, assessment of biochemical and hematologic changes related to oral administration of an iodinated contrast medium to patients undergoing radiologic investigation of, 322

General anesthesia, dimensional response of large airways during bronchography and relation to, 121

G.I. bleeding, transcatheter electrocoagulation of blood vessels in vascular radiology of, 295

Growth hormone, relationship between primary osteoarthrosis of the hip in females and level of growth hormone, 251

H

Hand-wrist ossification, determining the biological age of the preschool child from a radiograph of, 233

Hardening, measurement of bone mineral content affected by the polyenergetic character of the spectrum of ^{125}I and, 143

Hemoglobin dissociation, effect of contrast media used in angiography on, 191

High-speed cineradiography, movement of the mitral valve and its correlation with the first heart sound studied by, 150

Hydrocephalus, alterations in cerebrospinal fluid flow in the dog with chemical meningitis and, 33

I

^{125}I, measurement of bone mineral content as affected by the polyenergetic character of the spectrum of, 143

Image enhancement, radiographic displays and intensity-coded pseudostereoscopic, 170
Image transmission, picturephone used for nuclear, 244
Impaired cerebrospinal absorption, the dog with chemical meningitis and, 33
Indicator dilution technique, determination of the pulsatile blood flow by a radiographic method using, 255
Interest group influence, assessment of the importance of planning criteria in an academic radiology department and consideration of, 181
Iodine content of thyroid tissue, an absorption correction technique using fluorescent excitation to determine, 167
Iodipamide, effect of phenobarbitol on bile excretions of iopanoate and, 126
Iopanoate, effect of phenobarbitol on bile excretions of iodipamide and, 126
Iopanoic acid
effect of prostaglandin E_2 on biliary concentration of, 9
gastrointestinal absorption of, 1

K

K-absorption edge, quasi-monoenergetic x-ray beams used in fluoroscopy of elements with, 402
Kidney small vessels, lack of specificity of renal angiography of, 90
Knee, thermography as a screening procedure in internal derangement of the, 228

L

Lactic acid uptake, effect of meglumines, old Renografin, Conray and new Renografin on, 13
Localization error, detection and evaluation in patient radiation therapy of, 384

M

Magnification radiography, involvement of the parasympathetic nervous system in intrapulmonary airway narrowing after pulmonary thromboembolism studied by, 315
Magnification, some preliminary in vivo microradioscopic-morphometric observations on bone resorption using a 70mm roll-film enlarger for, 418
Medical journal as a clinical research tool, the (editorial), 96
Medulla oblongata, an electro-mechanical head support system for precise control of contrast media in myelography and possibility of recognizing signs of a mass in the, 178
Meglumines, metabolic and cardiovascular effects of, 13
Meningitis, cerebrospinal fluid flow alterations in the dog with chemical, 33
Mitral valve movement, first heart sound and its correlation with, 150
Muscle contraction, forearm angiography affected by, 22
Myelography, an electro-mechanical head support system for precise control of contrast media in, 178
Myelography Electro-Mechanical Head Support System, precise control of contrast media in myelography using the, 178

N

Needle, echo patterns with an ultrasonic transducer and, 78
Nephrotoxicity, adhesive contrast media (ACM) and, 61
Neutron radiography, pathologic bone samples and a comparison of x-ray and, 326

O

Oncologic diagnosis: an emerging subspecialty in diagnostic radiology (guest editorial), 425
Open forum clinical research protocol #1: does a normal isotope perfusion scan exclude pulmonary embolism? 97
Os calcis, photon absorption studies on ultrasound width measurement of, 156
Osteoporosis
effects of adipose tissue on the absorptiometric measurement of bone mineral mass, 84
measurement of the velocity of ultrasound in human cortical bone and its potential clinical importance in, 72

P

Pantopaque, an electro-mechanical head support system for precise control during myelography of, 178
Parasympathetic nervous system, intrapulmonary airway narrowing after pulmonary thromboembolism in dogs and the involvement of, 315
Pediatric allergy, dimensional response of large airways during bronchography and relation to, 121
Peribronchography, experimental studies of, 219
Pharmacoangiography, response of mesenteric vessels to vasoactive drugs following autotransplantation of the small intestine evaluated by, 138

Pharmacokinetics, renal contrast media and their, 210
Phenobarbitol, bile excretions of iodipamide and iopanoate affected by, 126
Photon absorption, ultrasound measurement of os calcis width for studies of, 156
Picturephone, nuclear image transmission by, 244
Popiodol Suspension, experimental studies of peribronchography using, 219
Premedication, sodium diatrizoate-induced convulsions in the rabbit affected by protective action of, 50
Primary osteoarthrosis, cortical bone remodeling and bone mass in, 251
Proceedings of the Association of University Radiologists Annual Meeting 1973. (Abstracts of papers presented), 259
Prostaglandin E_2, radiographic visualization of biliary tree unimproved by, 9
Pseudostereo, image enhancement of radiographic displays by intensity-coded, 170
Pulmonary diseases, feasible use of Fourier spectra to classify disseminated, 345
Pulmonary emboli, failure in using ^{131}I streptokinase to visualize experimentally produced thrombi and, 377
Pulmonary embolism, involvement of the parasympathetic nervous system in intrapulmonary airway narrowing after, 315
Pulsatile flow, radiographic method to determine, 255

Q

Quasi-monoenergetic x-rays, absorption edge fluoroscopy using, 402

R

Rabbit
  selective catheterization of the coronary arteries in the, 350
  protective action of acetazolamide against sodium diatrizoate-induced convulsions in, 50
Radiographic imaging process, field characteristics of the focal spot in the, 53
Radiographs
  closed circuit and microwave television technique for transmission of, 392
  factors affecting the detectability of a simulated radiographic signal in image analysis of, 339
Radiography
  assessment of biochemical and hematologic changes related to oral administration of an iodinated contrast medium to patients undergoing gastrointestinal, 322
  evidence of stagnant flow zones in the carotid circulation of anesthetized dogs by, 28
Radioisotopes (diagnostic), effects of adipose tissue on the absorptiometric measurement of bone mineral mass, 84
Radioisotope scanning, effects of adipose tissue on the absorptiometric measurement of bone mineral mass by, 84
Radiology facilities, assessment of the importance of planning criteria in academic, 181
Radiopaque contrast media, an absorption correction techniqhe for in vivo iodine quantitation by fluorescent excitation and use of, 167
Receiver Operating Characteristic curves, factors affecting the detectability of a simulated radiographic signal characterized by, 339
Renal arteriography
  diagnosis of renal parenchymal disease and lack of specificity of, 90
  effects of adhesive contrast material as studied in, 61
Renal contrast media, pharmacokinetics of, 210
Renal excretion, stop-flow technique used to study in dogs the processes of, 210
Renal hemodynamics, effect of adhesive contrast material (ACM) on, 61
Retrograde pyelography, effects of adhesive contrast material (ACM) as studied in, 61
ROC curve, nuclear image transmission by picturephone: evaluation by, 244

S

Scheduling, reducing patient delays in a diagnostic radiology department: analysis by simulation techniques to develop improved, 396
Screening procedure, use of thermography in internal derangement of the knee as a, 228
Secretin, deleterious effect on cholecystography, of, 9
Segmental collapse, bronchography in the pediatric patient and, 121
Selective noninvasive visualization, high-speed cineradiography in intact dogs in the study of mitral valve movement by, 150
Signal detection, nuclear image transmission by picturephone: evaluation by ROC curve method as part of theory of, 244
Silastic, producing communicating hydrocephalus by use of, 105
Silicon target storage tube, to enhance low contrast, periodic objects, use of, 43
Silicone rubber, producing communicating hydrocephalus by use of silastic, 105
Simulation, reducing patient delays in a diagnostic radiology department: analysis by techniques of, 396

Skeletal maturation, hand-wrist radiograph used to determine the preschool child's, 233

Small intestine, response of mesenteric vessels to vasoactive drugs following autotransplantation of the, 138

Small peripheral lung lesions, transthoracic needle biopsy of malignant, 305

Sodium diatrizoate
hemoglobin-oxygen equilibrium affected in angiography by, 191
protective action of acetazolamide against convulsions induced by, 50

Sodium ions, metabolic and cardiovascular effects of, 13

Solid state detector, an absorption correction technique for in vivo iodine quantification by fluorescent excitation source and, 167

Stop flow experiments, renal excretion processes studied in dogs by, 210

^{131}I streptokinase, failure to visualize experimentaly produce emboli and thrombi using, 377

T

Tantalum bronchography, involvement of the parasympathetic nervous system in pulmonary airway narrowing after pulmonary thromboembolism studied by, 315

Tantalum oxide, substitution of metallic tantalum powder by non-explosive, 333

Tantalum, tantalum oxide—a non-explosive substitute for powdered metallic, 333

Television, transmission of radiographic images via closed circuit and microwave, 392

Tests of concordance, planning criteria in an academic radiology department determined by, 181

Therapeutic radiology, detection and evaluation of localization errors in patient, 384

Thermography, screening procedure in internal derangement of the knee using, 228

Thrombi, angiographic evidence of stagnant flow zones in association with, 28

Thromboembolism, involvement of the parasympathetic nervous system in pulmonary airway narrowing after pulmonary, 315

Toxicity, positive action of acetazolamide against sodium diatrizoate, 50

Transducer, echo patterns with an aspiration ultrasonic, 78

Transmission, closed circuit and microwave television techniques for radiographic image, 392

Transplantation, response of mesenteric vessels to vasoactive drugs following small intestine, 138

Transthoracic needle biopsy, small peripheral malignant lung lesions and, 305

TV fluoroscopy, a multiple image subtraction technique for enhancing low contrast, periodic objects in, 43

U

Ultrasound
aspiration transducer used to detect echo patterns of, 78
measurement of os calcis width for photon absorption studies using, 156
potential clinical importance of the velocity in human cortical bone of, 72

V

Vagotomy, gallbladder size and contractility in the dog affected by, 371

Vagus nerve, intrapulmonary airway narrowing after pulmonary thromboembolism and involvement of, 315

Vanguard Motion Analyzer, an electro-mechanical head support system for precise control of contrast media in myelography developed with the aid of the, 178

Venous sampler, the (editorial), 423

Venous thrombosis, failure in using ^{131}I streptokinase to visualize clots in, 377

Vesicoureteral reflux, mongrel dogs and the incidence of naturally occurring, 354

Video image integration, enhancing low contrast, periodic objects by use of, 43

Video image subtraction, absorption edge fluoroscopy using quasi-monoenergetic x-ray beams and, 402

W

Width measurement, photon absorption studies on os calcis, 156

X

X-ray fluorescent excitation, an absorption correction technique for in vivo iodine quantitation by, 167

Investigative Radiology
